

GIS Global Bond Ex-US Fund

Quarterly Investment Report | 1Q23

For professional use only

Refer to Appendix for additional information

IMPORTANT NOTICE

Please note that this material contains the opinions of the manager as of the date noted, and may not have been updated to reflect real time market developments. All opinions are subject to change without notice.

Executive summary

Past performance does not predict future results.

Portfolio Performance

Interest rate and spread sector strategies contributed to performance, while currency strategies detracted over the quarter.

CONTRIBUTORS

- Overweight exposure to Dollar bloc duration, predominantly AUD and NZD, as rates rallied
- Curve positioning in European rates
- Overweight exposure to Korean and Singaporean duration, as the yield curves shifted downwards

DETRACTORS

- Overweight exposure to high yield financials, as spreads widened
- Underweight exposure to US duration, as rates rallied
- Underweight exposure to investment grade non-financials, as spreads tightened

Performance periods ended 31 Mar '23	3 mos.	6 mos.	1 yr.	3 yrs.	5 yrs.	10 yrs.	SI
Fund before fees	2.90	3.86	-3.50	0.16	1.49	3.25	4.77

Benchmark*	2.86	3.05	-3.27	-1.82	0.90	2.41	3.35

Past Performance is not a guarantee or reliable indicator of future results and no guarantee is being made that similar returns will be achieved in the future.

The following information should be read in conjunction with the 12-month rolling past performance information provided later in this presentation

Portfolio strategy

- Underweight overall duration: We maintain an underweight to duration in Japan and China. We favor exposure to the intermediate part of the curve in Australia, while being modestly short in the front and long end of the U.S. curve.
- European duration positioning: Neutral Euro Bloc duration, favoring Denmark vs. the Eurozone broadly.
- Selective credit holdings: Prefer holding high quality securitized credit in lieu of corporate credit. Maintain slight overweight to financials, particularly senior issues from global systemically important banks.
- Currency positioning: Overweight select currencies (AUD, NOK, and select EM currencies) based on valuations. Maintain a long to JPY given its flight-to-quality characteristics.

Fund specific risks

Risk	Risk Description
Counterparty Risk	Other financial institutions provide services such as safekeeping of assets or as a counterparty to financial contracts such as derivatives. The fund is exposed to the risk of bankruptcy, or other type of default of transaction counterparties.
Credit and Default Risk	A decline in the financial health of an issuer of a fixed income security can lead to an inability or unwillingness to repay a loan or meet a contractual obligation. This could cause the value of its bonds to fall or become worthless. Funds with high exposures to non-investment grade securities have a higher exposure to this risk.
Currency Risk	Changes in exchange rates may cause the value of investments to decrease or increase.
Derivatives and Counterparty Risk	The use of certain derivatives could result in the fund having a greater or more volatile exposure to the underlying assets and an increased exposure to counterparty risk. This may expose the fund to larger gains or losses associated with market movements or in relation to a trade counterparty being unable to meet its obligations.
Emerging Markets Risk	Emerging markets, and especially frontier markets, generally carry greater political, legal, counterparty and operational risk. Investments in these markets may expose the fund to larger gains or losses.
Liquidity Risk	Difficult market conditions could result in certain securities becoming hard to sell at a desired time and price.
Interest Rate Risk	Changes in interest rates will usually result in the values of bond and other debt instruments moving in the opposite direction (e.g. a rise in interest rates likely leads to fall in bond prices).
Mortgage Related and Other Asset Backed Securities Risks	Mortgage or asset backed securities are subject to similar risks as other fixed income securities, and may also be subject to prepayment risk and higher levels of credit and liquidity risk.
China InterBank Bond Market ("CIBM")	The fund may be exposed to liquidity risks, settlement risks, default of counterparties and market volatility associated with CIBM. In addition, the CIBM rules are new and still subject to further clarification and/or changes, which may adversely affect the fund's capability to invest in the CIBM.

Quarter in Review

Volatility rises, yields end the quarter lower

The fundamental backdrop showed signs of a slowdown amid financial sector instability, while inflation slowed. In response, markets revised their expectations for central bank rate hikes as volatility may lead to a sharp pullback in bank lending. The Fed hiked its policy rate (50 bps over the quarter) and dampened expectations for further hikes. Global central banks largely followed suit with monetary tightening and weakened forward guidance, while developed market yields fell over the quarter. Meanwhile, risk sentiment improved despite the collapse of Silicon Valley Bank and the Credit Suisse-UBS merger, with the MSCI World up 7.7%.

Rate volatility rose to levels not seen since the Great Financial Crisis on the back of banking sector fragility, with March resulting in the largest monthly drop for the 2-year Treasury since 2008.

Volatility in the financial sector may lead to a sharp pullback in bank lending, causing markets to price in only 1 additional rate hike in 2023 before expecting the Fed to cut in the latter half of 2023.

Market Summary

Q1'23: Volatility rises, yields end the quarter lower

Interest rate and spread sector strategies contributed to performance, while currency strategies detracted over the quarter.

Developed market debt

The emergence of financial contagion risks in March prompted an abrupt shift in expectations for U.S. monetary policy as yields fell meaningfully for most maturities across the U.S. Treasury curve. In developed markets outside of the U.S., including the U.K. and Japan, yields similarly fell against a backdrop of increasing risk aversion.

Credit

Global investment grade credit spreads widened 5 bps, ending the quarter at 153 bps. The sector returned 3.06%, outperforming like-duration treasuries by 0.33%. Credit spreads widened amid late-quarter volatility in the global banking sector, while returns were positive given the coinciding rally in rates.

Commodities

Commodities delivered negative returns in Q1. Oil prices fell 7% over the quarter to \$79.77/barrel as banking fears heightened global growth concerns. Natural gas prices fell as warm weather led to lower demand and high inventories in Europe. Agricultural commodities were flat over the quarter, as gains in softs were offset by losses in wheat. Base metals fell over the quarter while gold was higher amid strong demand for safe-haven assets.

Fractured Markets, Strong Bonds: Macro outlook

Three Economic Themes Through 2023 Across Developed Markets (DM)

**Potentially deeper
recession, sooner**

**Central banks:
Less tightening,
but slower easing**

**Fiscal policy and
regulation: Focus
on moral hazard?**

Portfolio Outlook

Strategic outlook

Recent volatility in the banking sector has raised the prospect of a significant tightening of credit conditions, particularly in the U.S., and therefore the risk of a sooner and deeper recession. These recent events will likely act as yet another headwind that could very well pull Europe into recession as well. Meanwhile, annualized core inflation rates in the U.S. have fallen for 5 consecutive months, and headline inflation has declined for 8 consecutive months. The combination of a higher cost of lending and early signs of easing inflation likely puts global central banks near to or already at the end of their tightening cycles.

Key strategies

Interest Rate Strategies

The portfolio is underweight to overall duration with a focus on country, maturity and instrument selection. Focus duration underweight in Japan, given the likely end to their YCC framework, and China, as economic growth may rebound following the end of COVID-Zero policies.

Spread Positioning

We prefer exposure to senior securitized assets, particularly mortgage-related assets in the U.S. and Europe with strong fundamentals and compelling valuations. We maintain a slight overweight to financials, particularly senior issues from global systemically important banks.

European Country Positioning

The portfolio is neutral to duration across Euro bloc countries, favoring Denmark vs. the Eurozone broadly (core, semi-core, and peripherals).

Currencies

Overweight a basket of select currencies (AUD, NOK, and select EM currencies) based on valuations funded by a short to TWD and USD. Maintain long exposure to the Japanese yen given attractive valuations and its flight-to-quality characteristics.

Important Disclosures

Past performance is not a guarantee or a reliable indicator of future results. The “gross of fees” performance figures are presented before management fees and custodial fees, but do reflect commissions, other expenses and reinvestment of earnings. The “net of fees” performance figures reflect the deduction of ongoing charges. All periods longer than one year are annualized.

Statements concerning financial market trends or portfolio strategies are based on current market conditions, which will fluctuate. There is no guarantee that these investment strategies will work under all market conditions or are appropriate for all investors and each investor should evaluate their ability to invest for the long term, especially during periods of downturn in the market. Outlook and strategies are subject to change without notice.

Portfolio structure is subject to change without notice and may not be representative of current or future allocations.

The following defined terms are used throughout the report. **Emerging market short duration instruments** includes an emerging market security or other instrument economically tied to an emerging market country by country of risk with an effective duration less than one year and rated investment grade or higher or if unrated, determined to be similar quality by PIMCO. **Net other short duration instruments** includes securities and other instruments (except instruments tied to emerging markets by country of risk) with an effective duration less than one year and rated investment grade or higher or, if unrated, determined by PIMCO to be of comparable quality, commingled liquidity funds, uninvested cash, interest receivables, net unsettled trades, broker money and derivatives offset. With respect to certain categories of short duration securities, the Adviser reserves the discretion to require a minimum credit rating higher than investment grade for inclusion in this category. **Short duration derivatives and derivatives offsets** include: 1) derivatives with an effective duration less than one year and where the country of risk is not an emerging market country (for example, Eurodollar futures) and 2) offsets associated with investments in futures, swaps and other derivatives. Such offsets may be taken at the notional value of the derivative position which in certain instances may exceed the actual amount owed on such positions. **Municipals/Other** may include convertibles, preferred and yankee bonds.

The average distribution yield is the average of the last four quarterly distribution yields. The quarterly distribution yield is calculated by annualizing the quarter's distribution and dividing by the NAV on the last business day of the period. It does not include long- or short-term capital gains distributions. Average coupon is the average of the coupon payments of the underlying bonds within the portfolio. Average coupon is the average of the coupon payments of the underlying bonds within the portfolio. Average effective maturity is a weighted average of all the maturities of the bonds in a portfolio, computed by weighting each bond's effective maturity by the market value of the security. Duration is the measure of a bond's price sensitivity to interest rates and is expressed in years. Effective duration is the duration for a bond with an embedded option when the value is calculated to include the expected change in cash flow caused by the option as interest rates change. PIMCO uses an internal model for calculating effective duration, which may result in a different value for the duration of an index compared to the duration calculated by the index provider or another third party. Information ratio is a ratio of portfolio returns above the returns of a benchmark to the volatility of those returns. Tracking error measures the dispersion or volatility of excess returns relative to a benchmark. Tracking error measures the dispersion or volatility of excess returns relative to a benchmark.

Investments made by a Fund and the results achieved by a Fund are not expected to be the same as those made by any other PIMCO-advised Fund, including those with a similar name, investment objective or policies. A new or smaller Fund's performance may not represent how the Fund is expected to or may perform in the long-term. New Funds have limited operating histories for investors to evaluate and new and smaller Funds may not attract sufficient assets to achieve investment and trading efficiencies. A Fund may be forced to sell a comparatively large portion of its portfolio to meet significant shareholder redemptions for cash, or hold a comparatively large portion of its portfolio in cash due to significant share purchases for cash, in each case when the Fund otherwise would not seek to do so, which may adversely affect performance.

Differences in the Fund's performance versus the index and related attribution information with respect to particular categories of securities or individual positions may be attributable, in part, to differences in the pricing methodologies used by the Fund and the index.

Forecasts, estimates and certain information contained herein are based upon proprietary research and should not be interpreted as investment advice, as an offer or solicitation, nor as the purchase or sale of any financial instrument. Forecasts and estimates have certain inherent limitations, and unlike an actual performance record, do not reflect actual trading, liquidity constraints, fees, and/or other costs. In addition, references to future results should not be construed as an estimate or promise of results that a client portfolio may achieve.

Important Disclosures

Unit value can go up as well as down and any capital invested in the fund may be at risk. The fund may invest in non-U.S. and non-eurozone securities which involve potentially higher risks including currency fluctuations and political or economic developments. These may be enhanced when investing in emerging markets. Funds that invest in high-yield, lower-rated securities, will generally involve greater volatility and risk to principal than investments in higher-rated securities. The fund may use derivatives for hedging or as part of its investment strategy which may involve certain costs and risks. Portfolios investing in derivatives could lose more than the principal amount invested. For more details on the fund's potential risks, please read the Prospectus and Key Investor Information Document.

A word about risk: Investing in the **bond market** is subject to risks, including market, interest rate, issuer, credit, inflation risk, and liquidity risk. The value of most bonds and bond strategies are impacted by changes in interest rates. Bonds and bond strategies with longer durations tend to be more sensitive and volatile than those with shorter durations; bond prices generally fall as interest rates rise, and low interest rate environments increase this risk. Reductions in bond counterparty capacity may contribute to decreased market liquidity and increased price volatility. Bond investments may be worth more or less than the original cost when redeemed. Investing in **foreign denominated and/or domiciled securities** may involve heightened risk due to currency fluctuations, and economic and political risks, which may be enhanced in emerging markets. Sovereign securities are generally backed by the issuing government, obligations of U.S. Government agencies and authorities are supported by varying degrees but are generally not backed by the full faith of the U.S. Government; portfolios that invest in such securities are not guaranteed and will fluctuate in value. **Mortgage and asset-backed securities** may be sensitive to changes in interest rates, subject to early repayment risk, and while generally supported by a government, government-agency or private guarantor there is no assurance that the guarantor will meet its obligations. **Mortgage and asset-backed securities** may be sensitive to changes in interest rates, subject to early repayment risk, and while generally supported by a government, government-agency or private guarantor there is no assurance that the guarantor will meet its obligations. **High-yield**, lower-rated, securities involve greater risk than higher-rated securities; portfolios that invest in them may be subject to greater levels of credit and liquidity risk than portfolios that do not. **Derivatives** may involve certain costs and risks such as liquidity, interest rate, market, credit, management and the risk that a position could not be closed when most advantageous. Investing in derivatives could lose more than the amount invested. The credit quality of a particular security or group of securities does not ensure the stability or safety of the overall portfolio. **Diversification** does not ensure against loss.

GIS Funds

PIMCO Funds: Global Investors Series plc is an umbrella type open-ended investment company with variable capital and is incorporated with limited liability under the laws of Ireland with registered number 276928. The information is not for use within any country or with respect to any person(s) where such use could constitute a violation of the applicable law. The information contained in this communication is intended to supplement information contained in the prospectus for this Fund and must be read in conjunction therewith. Investors should consider the investment objectives, risks, charges and expenses of these Funds carefully before investing. This and other information is contained in the Fund's prospectus. Please read the prospectus carefully before you invest or send money. Past performance is not a guarantee or a reliable indicator of future results and no guarantee is being made that similar returns will be achieved in the future. Returns are net of fees and other expenses and include reinvestment of dividends. The performance data represents past performance and investment return and principal value will fluctuate so that the PIMCO **GIS Funds** shares, when redeemed, may be worth more or less than the original cost. Potential differences in performance figures are due to rounding. The Fund may invest in non- U.S. or non-Eurozone securities which involves potentially higher risks including non-U.S. or non-Euro currency fluctuations and political or economic uncertainty. For informational purposes only. Please note that not all Funds are registered for sale in every jurisdiction. Please contact PIMCO Europe Ltd for more information. For additional information and/or a copy of the Fund's prospectus, please contact the Administrator: State Street Fund Services (Ireland) Limited, Telephone +353-1-776-0142, Fax +353-1-562-5517. © 2023.

Important Disclosures

Benchmark

Unless referenced in the prospectus and relevant key investor information document, a benchmark or index in this material is not used in the active management of the Fund, in particular for performance comparison purposes.

Where referenced in the prospectus and relevant key investor information document a benchmark may be used as part of the active management of the Fund including, but not limited to, for duration measurement, as a benchmark which the Fund seeks to outperform, performance comparison purposes and/or relative VaR measurement. Any reference to an index or benchmark in this material, and which is not referenced in the prospectus and relevant key investor information document, is purely for illustrative or informational purposes (such as to provide general financial information or market context) and is not for performance comparison purposes. Please contact your PIMCO representative for further details.

The fund is actively managed in reference to the Bloomberg Global Aggregate ex-USD (USD Hedged) Index as further outlined in the prospectus and key investor information document.

Correlation

As outlined under "Benchmark", where [disclosed herein] and referenced in the prospectus and relevant key investor information document, a benchmark may be used as part of the active management of the Fund. In such instances, certain of the Fund's securities may be components of and may have similar weightings to the benchmark and the Fund may from time to time show a high degree of correlation with the performance of any such benchmark. However the benchmark is not used to define the portfolio composition of the Fund and the Fund may be wholly invested in securities which are not constituents of the benchmark.

Investors should note that a Fund may from time to time show a high degree of correlation with the performance of one or more financial indices not referenced in the prospectus and relevant key investor information document. Such correlation may be coincidental or may arise because any such financial index may be representative of the asset class, market sector or geographic location in which the Fund is invested or uses a similar investment methodology to that used in managing the Fund.

Investment restrictions — In accordance with the UCITS regulations and subject to any investment restrictions outlined in the Fund's prospectus, the Fund may invest over 35% of net assets in different transferable securities and money market instruments issued or guaranteed by any of the following: OECD Governments (provided the relevant issues are investment grade), Government of Singapore, European Investment Bank, European Bank for Reconstruction and Development, International Finance Corporation, International Monetary Fund, Euratom, The Asian Development Bank, European Central Bank, Council of Europe, Eurofima, African Development Bank, International Bank for Reconstruction and Development (The World Bank), The Inter American Development Bank, European Union, Federal National Mortgage Association (Fannie Mae), Federal Home Loan Mortgage Corporation (Freddie Mac), Government National Mortgage Association (Ginnie Mae), Student Loan Marketing Association (Sallie Mae), Federal Home Loan Bank, Federal Farm Credit Bank, Tennessee Valley Authority, Straight-A Funding LLC.

Important Disclosures

Acronyms and definitions of investment terms used throughout the report:

Alpha is a measure of performance on a risk-adjusted basis calculated by comparing the volatility (price risk) of a portfolio vs. its risk-adjusted performance to a benchmark index; the excess return relative to the benchmark is alpha.

Average coupon is the average of the coupon payments of the underlying bonds within the portfolio.

Average effective maturity is a weighted average of all the maturities of the bonds in a portfolio, computed by weighting each bond's effective maturity by the market value of the security.

"Bend-but-not-break" refers to credits that PIMCO would not expect to default in a credit-stressed environment.

Beta is a measure of price sensitivity to market movements. Market beta is 1.

Breakeven inflation rate (or expectation) is a market-based measure of expected inflation or the difference between the yield of a nominal and an inflation-linked bond of the same maturity.

Carry is the rate of interest earned by holding the respective securities.

The terms **"cheap" and "rich"** as used herein generally refer to a security or asset class that is deemed to be substantially under- or overpriced compared to both its historical average as well as to the investment manager's future expectations. There is no guarantee of future results or that a security's valuation will ensure a profit or protect against a loss.

CPI is the Consumer Price Index.

The **credit quality** of a particular security or group of securities does not ensure the stability or safety of an overall portfolio. The quality ratings of individual issues/issuers are provided to indicate the credit-worthiness of such issues/issuer and generally range from AAA, Aaa, or AAA (highest) to D, C, or D (lowest) for S&P, Moody's, and Fitch respectively.

Dividend yield is represented by the weighted average coupon divided by the weighted average price.

Duration is the measure of a bond's price sensitivity to interest rates and is expressed in years.

Effective duration is the duration for a bond with an embedded option when the value is calculated to include the expected change in cash flow caused by the option as interest rates change.

Forward curve is a function graph that defines the prices at which a contract for future delivery or payment can be concluded today.

Information ratio is a ratio of portfolio returns above the returns of a benchmark to the volatility of those returns.

Like-duration Securities are calculated by the index provider by comparing the index return to a hypothetical matched position in the security.

The **Option Adjusted Spread (OAS)** measures the spread over a variety of possible interest rate paths. A security's OAS is the average return an investor will earn over Treasury returns, taking all possible future interest rate scenarios into account. The OAS is the net spread over the swap curve that will on average be earned if the security is held to maturity.

"Risk assets" are any financial security or instrument that are likely to fluctuate in price.

Risk premia is the return in excess of the risk-free rate of return an investment is expected to yield.

Roll yield is the yield that a futures investor captures as their long position in a futures contract converges to the spot price.

"Safe haven" is an investment that is expected to retain or increase in value during times of market turbulence.

The **SEC yield** is an annualized yield based on the most recent 30 day period. The subsidized yield includes contractual expense reimbursements and it would be lower without those reimbursements. The **Unsubsidized 30 day SEC Yield** excludes contractual expense reimbursements.

Tracking error measures the dispersion or volatility of excess returns relative to a benchmark.

To relate the price sensitivity of ILBs to changes in nominal yields, yield beta is applied to nominal changes to arrive at a price sensitivity of ILBs to changes in nominal rates. A **yield beta** of 0.90 implies that if nominal yields move 100 basis points, real yields will move 90 basis points. ILBs with long maturity may respond differently to changes in nominal rates than shorter maturity ILBs.

The distribution yield for monthly paying Funds is calculated by annualizing actual dividends distributed for the monthly period ended on the date shown and dividing by the net asset value on the last business day for the same period. The distribution yield for quarterly paying Funds is calculated by taking the average of the prior four quarterly distribution yields. The quarterly distribution yields are calculated by annualizing actual dividends distributed for the quarterly period ended on the most recent quarterly distribution date and dividing by the net asset value for the same date. The yield does not include long- or short-term capital gains distributions.
